Farming Guidelines

AI-Powered Voice Crop Advisor for Farmers

1. Soil Preparation

- Test soil before planting and follow recommended nutrient requirements.
- Prepare the field properly and maintain good drainage.
- Use organic matter such as compost or well-decomposed farmyard manure where suitable.

2. Seed Selection and Sowing

- Choose certified, healthy and locally suitable seeds.
- Use the recommended sowing time, seed rate and spacing for the crop.
- Treat seeds according to local agricultural recommendations to reduce seed-borne diseases.

3. Water Management

- Use irrigation according to crop stage, soil type and weather conditions.
- Avoid waterlogging and unnecessary irrigation.
- Prefer efficient methods such as drip or sprinkler irrigation where practical.

4. Nutrient Management

- Apply fertilizers based on soil-test recommendations and crop requirements.
- Use balanced nutrients rather than excessive nitrogen.
- Split fertilizer application when recommended for the crop.

5. Weed Management

- Control weeds early because they compete with crops for water, nutrients and light.
- Use mulching, hand weeding, mechanical methods or approved herbicides as appropriate.
- Follow herbicide label instructions and observe safety precautions.

6. Harvest and Storage

- Harvest at the recommended maturity stage to maintain quality.
- Dry produce to a safe moisture level before storage.
- Keep storage areas clean, dry and protected from pests.
