Pest Management

AI-Powered Voice Crop Advisor for Farmers

1. Integrated Pest Management (IPM)

- Start with prevention, monitoring and cultural practices before considering pesticides.
- Use resistant or tolerant varieties where available.
- Encourage beneficial insects and maintain field biodiversity.

2. Regular Monitoring

- Inspect crops at least weekly during active growth and more frequently during pest outbreaks.
- Check the underside of leaves, growing points, flowers and fruits.
- Identify the pest correctly before selecting a control method.

3. Biological and Mechanical Control

- Use biological control agents or beneficial organisms when recommended.
- Remove and destroy heavily infested plant parts where practical.
- Use traps, barriers, nets or other physical methods for suitable pests.

4. Chemical Control

- Use pesticides only when necessary and according to local recommendations.
- Read and follow the product label for dose, crop, target pest, protective equipment and waiting period.
- Do not mix pesticides unless the combination is specifically recommended.

5. Safe Pesticide Practices

- Wear appropriate protective clothing and avoid direct contact with pesticides.
- Keep pesticides away from children, food, animal feed and water sources.
- Dispose of empty containers according to local regulations; never reuse pesticide containers.

6. Resistance Management

- Avoid repeated use of the same pesticide group.
- Rotate effective modes of action when chemical control is necessary.
- Do not exceed the recommended dose or spray frequency.
